Python Developer (API & Frontend Development)

Location: UK (Remote) | **Type:** Part-time | **Position:** Paid Internship/Freelance (first month unpaid evaluation period)

About the Role

We are looking for a **Python Developer** with skills in **backend API development and frontend integration** to contribute to building modern, data-driven web applications. This role is ideal for students and graduates interested in applying software engineering principles to real-world projects.

Key Responsibilities

- Develop and maintain **RESTful APIs** using Python frameworks (e.g., Flask, FastAPI, Django).
- Collaborate on **frontend development** using modern frameworks (React, Vue, or similar).
- Integrate backend services with frontend applications.
- Work with databases (SQL/NoSQL) to store and query application data.
- Contribute to system design and ensure scalability, reliability, and performance.

Requirements

- Strong proficiency in **Python**.
- Background in **Computer Engineering** or a related discipline.
- Knowledge of **API development and frontend frameworks**.
- Familiarity with relational databases (PostgreSQL, MySQL) and version control (Git).
- Strong problem-solving skills and eagerness to learn.

Eligibility

- Open to **3rd and 4th-year students, Master's and PhD students, and recent graduates**.
- Internship/Freelance position (part-time).
- **First month is an unpaid evaluation period**, followed by a paid arrangement.

This role is open for one of our business partners in the United Kingdom. Please send your resume via this application form: https://linmetrics.com/DarOo
